## Weekly Status Report #5

### Goals from last week:

- Start work on the beta release
  - Basic implementations of UI, Calculator, Network, Server and Data Manager
  - Write basic tests for all of those classes
  - All app pages have some functionality
  - User can do basic tasks, but not the whole workflow has to be complete

### Progress this week:

- Progress
  - Completed some basic beta functionality
  - Local app storage now working
  - Refactored some of the server-side code
  - Daily build is now working
  - Set up basic calculator functionality
- Problems
  - Connecting work from different teams is difficult
  - Our UI Framework's website vanished
- Lessons
  - Even a simple app requires more classes and objects than previously thought-requiring more software engineering than thought
  - Reliable resources are important

### Plans and goals for next week:

- Complete beta release
- Pat each other on the back over the beta release
- Re-evaluate our desired stretch features and determine which should be potentially implemented
